

Investment OS

From News to Impact - Enabling a Faster Response to Events

Agenda

News in Investment Research

Problem Identification and user Research

Outcome Mapping and Value Generation

Detailed Feature Breakdown

Feature Analysis:
Pitfalls, Mitigation and Future Roadmap

News in Investment Research

About Investment OS

Investment OS builds AI research agents that help investors uncover **high-conviction insights** in minutes, not weeks. By automating analysis of filings, transcripts, and alternative data—and integrating seamlessly into **existing workflows**—it surfaces narrative shifts, management credibility, and competitive dynamics that traditional dashboards miss. Designed by investors for investors, it combines powerful automation with human judgment.

News and Alternate Data in Equity Research

 News forms a subset of '**Alternative Data**' which satellite images, social media posts, geolocation data, news feeds, and communications metadata

 **67%** of investment firms now use alternative data in research workflows as compared to **31%** in 2022¹

 Recent studies confirm news sentiment and event detectors boost **short-term predictive power** across returns, M&A, volatility, and risk signals.³

How often do you use both data types together?

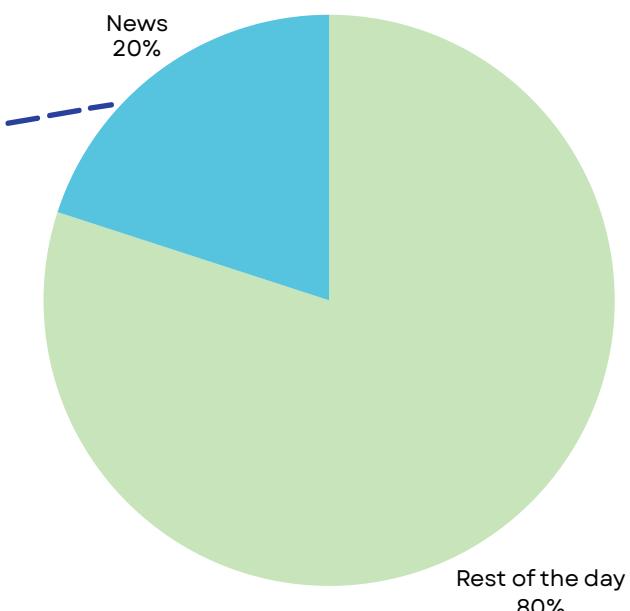

Private Equity
Hedge Fund
Venture Capital

AI has **democratised** the use of alternate data, the use for which was earlier driven primarily by Hedge Funds

Analyst Effort Investment

- Analysts spend 50-60 hour work weeks of which **20%** of their time is allocated to monitoring and synthesising news events
- Depending upon the news event, it can take on an avg **30mins** to prepare a quick flash card to **2hrs** for a comprehensive report for the news impact analysis

Why Should We Solve Now?

94% of alternative data users said they use it in combination with fundamental analysis to make investment decisions¹

4/5 alternative investment managers plan to increase their budget for alternative data²

- News synthesis and analysis can provide goldmine of sentiment analysis, which has strong predictive value
- Current tools provide insights and summaries, but not **impact and trend analysis**

Problem Identification and User Research

Rohan Mishra, 28
Buy Side EUR Equities

Stock price drops > 5%

RCA & Correlation

Correlating the price movement with news & events

Trend Analysis

Studies historical trend of such news and events, and their impact on stock price

Impact Magnitude

Assess whether this is short-term or long-term in nature

Report Preparation

Prepares report to show to higher management for thesis tracking

Pain Points from User Interviews

1. Juggling with **multiple tools** during this entire process - **Alerts** (Google alerts/Scout Quest), **Sources** (news source), **AI tools** for summarising and preparing reports
2. **Manual groundwork** for identifying the base level impact, **deeper research** on multiple **inter-connected aspects** (industry, peer companies, key metrics, etc.)
3. **Collating data** to analyse **historical trends** and correlation during similar events
4. Translating all the analysis into **downstream workflow** - modelling, thesis, etc.

Key Takeaways

↑ Number of tools used	=	↑ Friction in workflow
↑ Time spent in data collection and manual work.	=	↑ Less time for actual judgement work
↑ Time spent per company	=	↓ Number of companies covered
↑ News & events with inc in companies	=	↑ Time to action per event

Shrehan Shah, 26
Buy Side US Equities

Relevant news comes up

Analysis & Synthesis

Analyse news events and identifying its **impact** on the company

Report Preparation

Prepare the impact **report** on company level and how it affects industry specific KPIs

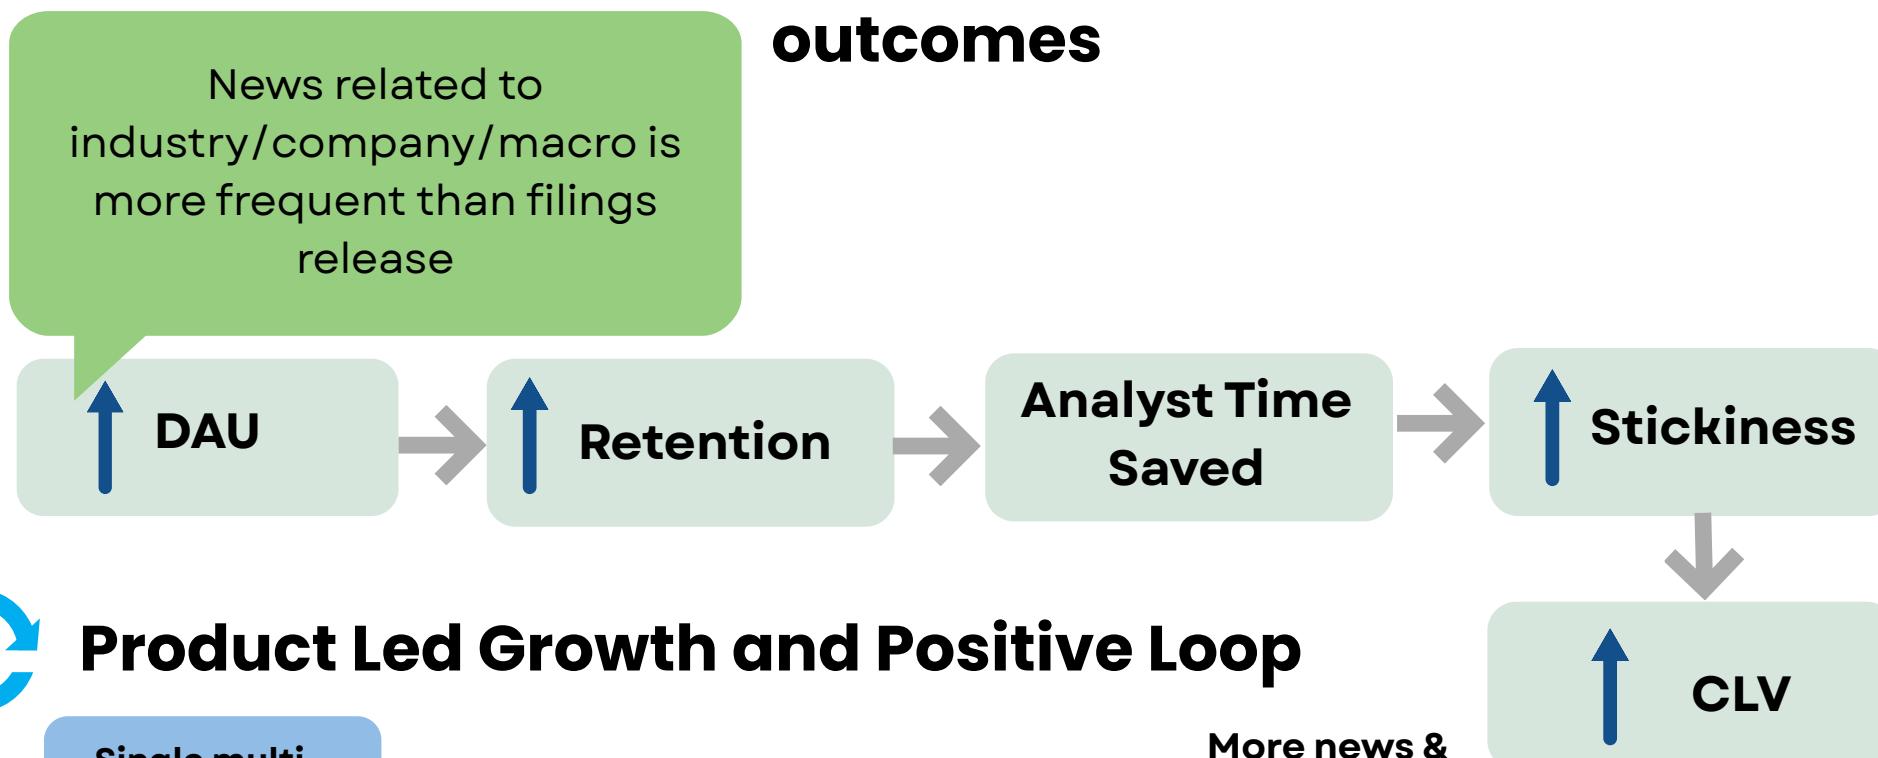

Downstream Workflow

Quantifying the impact and flowing it to the **financial model**

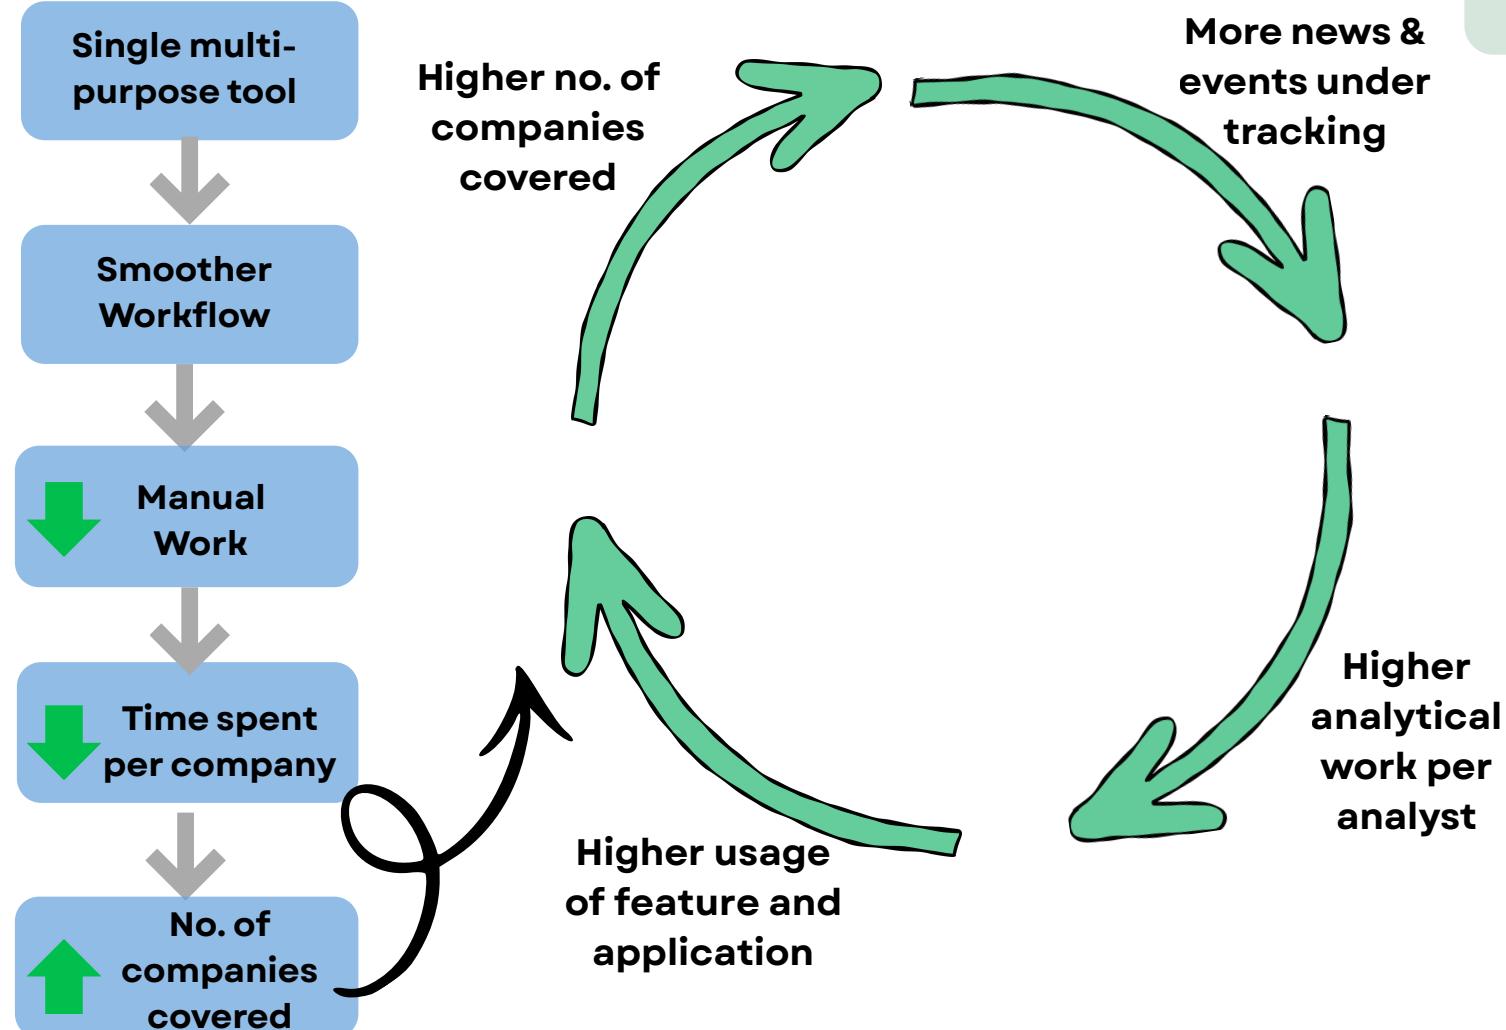

Outcome Mapping and Value Generation

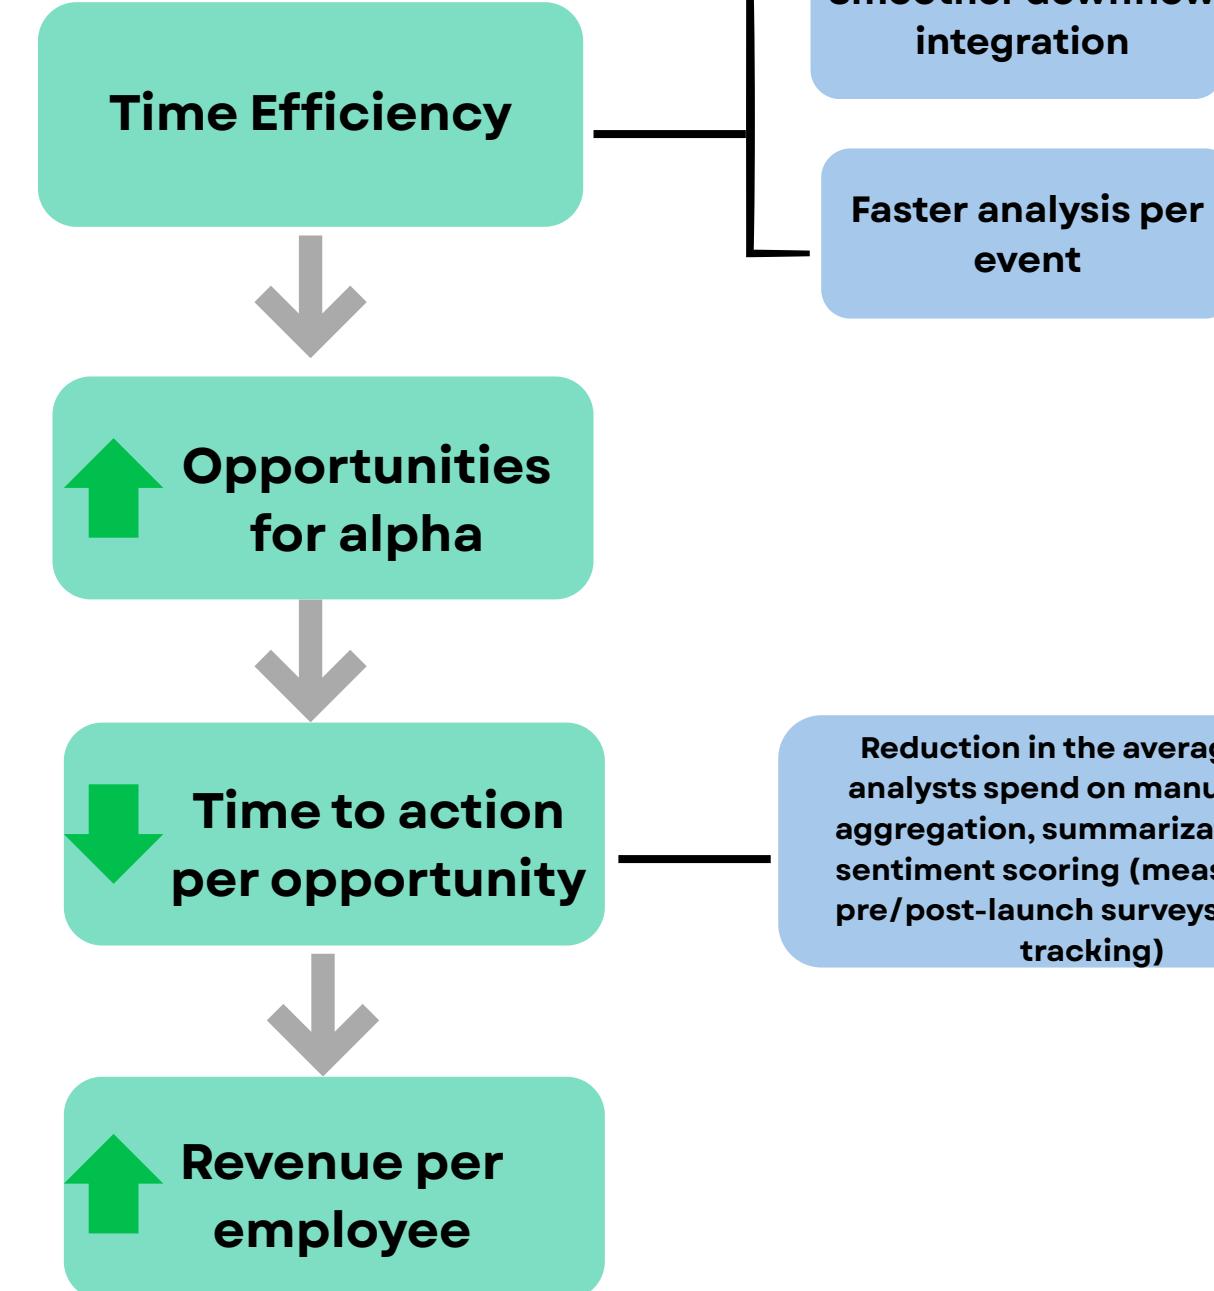

Desired product outcomes which can impact business outcomes

Product Led Growth and Positive Loop

Value generation for customer

Incremental Revenue

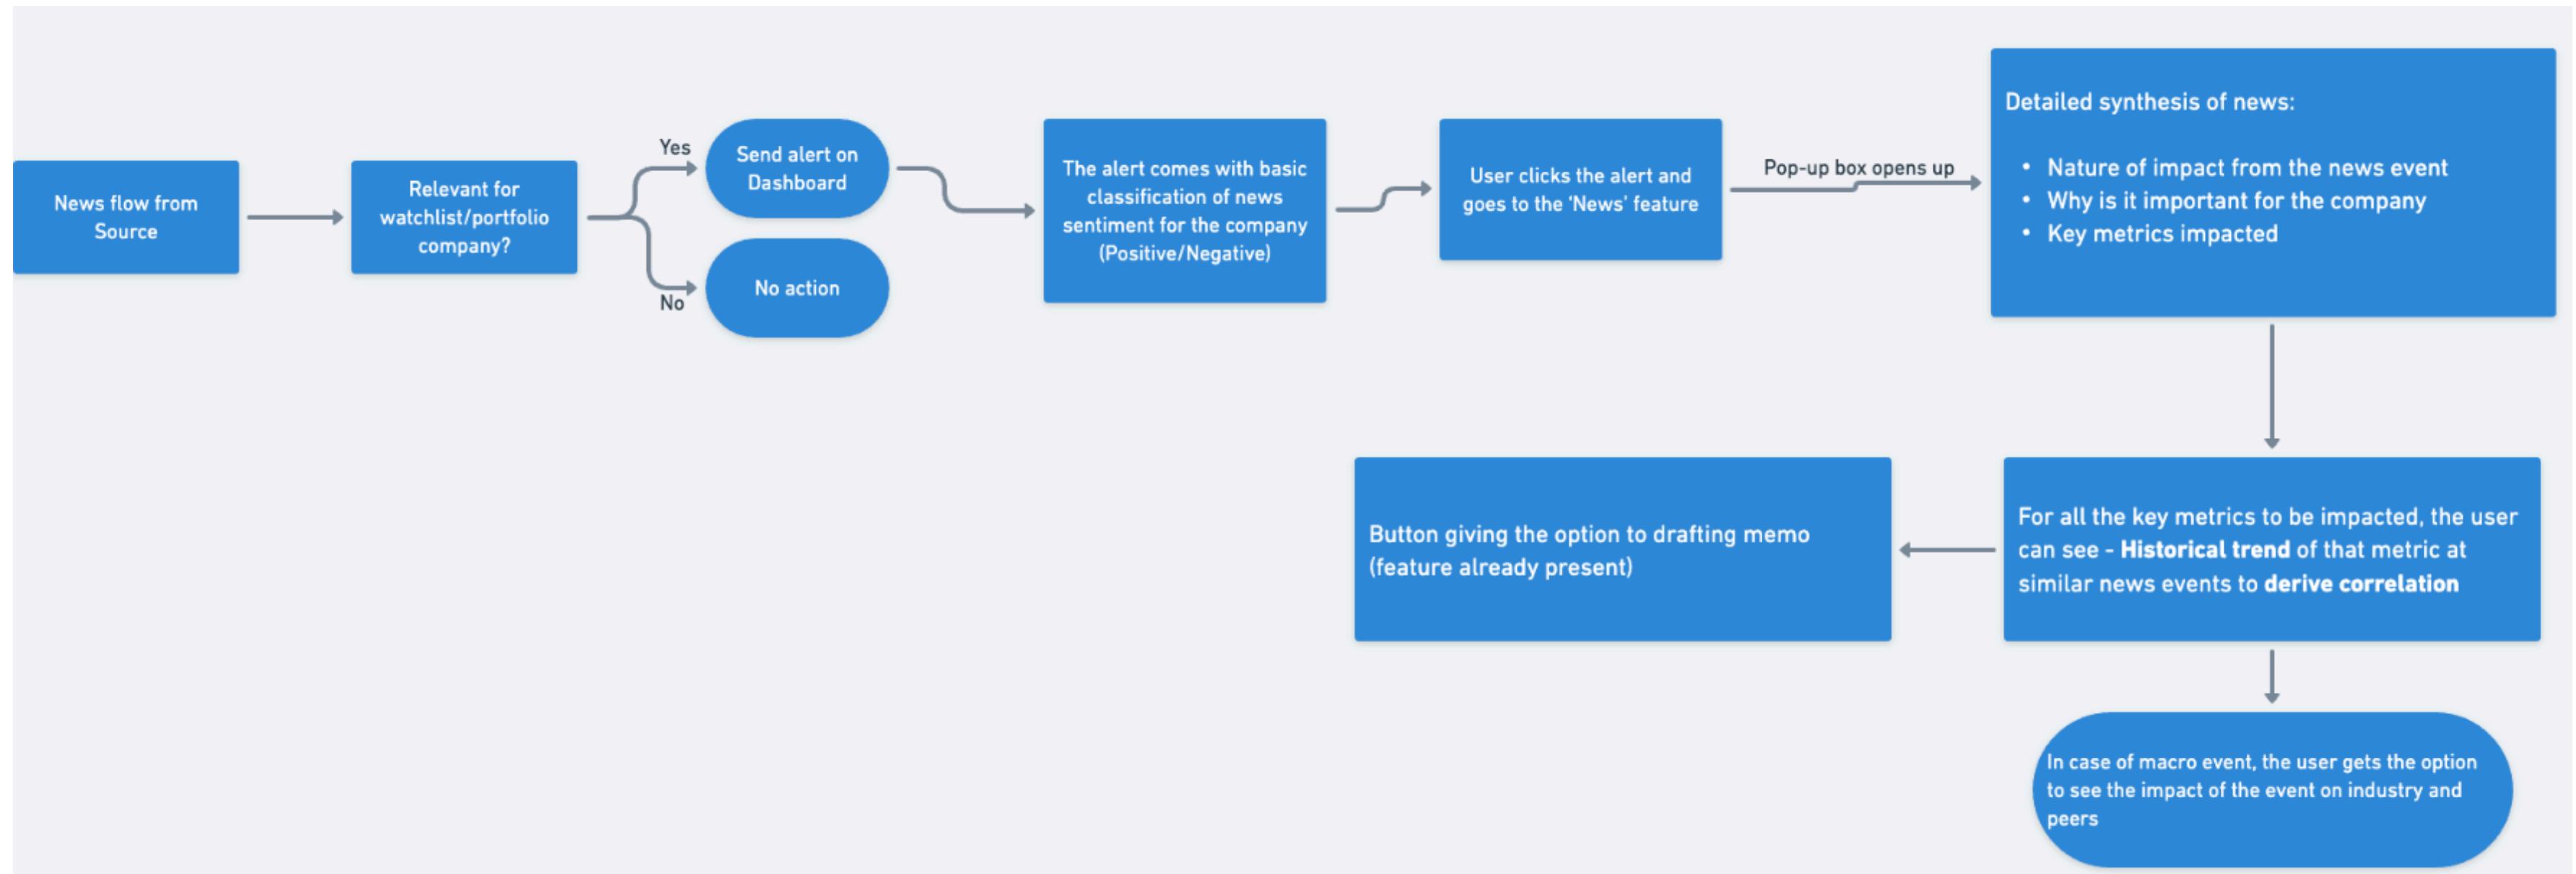

Increase in tool usage

Higher time saved per analyst

More seats per customer

Detailed Feature: Removing Noise and Enabling Insights From Unstructured Data

User Flow

Detailed Feature: Removing Noise and Enabling Insights From Unstructured Data

Alerts Page

The Alerts Page displays news alerts for portfolio companies. It includes a sidebar with navigation links: ResearchHub, News Feed, Portfolio, Alerts (with 3 unread), Reports, and Webhooks. The main area shows three alerts:

- AAPL - Strong Earnings Beat** (high impact score): Apple reported Q4 results significantly above consensus. Services revenue reached record \$25.5B. Impact score: +72 (Highly Positive). Dec 4, 12:47 PM. Webhook sent.
- NVDA - Major Product Launch** (critical): NVIDIA unveiled Blackwell architecture with 4x AI performance improvement. All major cloud providers committed to deployment. Impact score: +85 (Highly Positive). Dec 4, 12:47 PM. Webhook sent.
- Tech Sector - EU Regulatory Risk** (medium): European Union announced expanded investigations into tech companies. Apple and Microsoft may face DMA-related fines. Impact score: -25 (Negative). Dec 4, 12:47 PM. Webhook sent.

User can filter the news alters based on priority

Alerts Page will have basic details about the nature of the news, company name, impact score, sentiment, date and time

Here's a [link](#) to the prototype

News Feed Page

The News Feed Page displays AI-powered insights on portfolio companies. It includes a sidebar with navigation links: ResearchHub, News Feed, Portfolio, Alerts (with 3 unread), Reports, and Webhooks. The main area shows news items with filters:

- JNJ regulatory**: FDA Approves J&J's Novel Immunotherapy for Lung Cancer. Impact score: +58. Jan 11, 12:00 PM. BioPharma Dive.
- AAPL regulatory**: Tech Sector Faces Increased Regulatory Scrutiny in EU. Impact score: -25. Jan 10, 7:00 PM. Wall Street Journal.

Filters include: Search news..., All Companies, All Types, and Filters.

User can filter the news by company

User can filter the news by type: comp specific, industry, regulatory, etc.

User can filter by impact score and status

News Feed page contains all news related to portfolio companies with **citations** having various filters to view the feed along with a button to generate report

Button to generate report

News Detail

AAPL Wall Street Journal
January 10, 2025 • 7:00 PM

Tech Sector Faces Increased Regulatory Scrutiny in EU

Impact Score **-25**

Historical Trend Analysis **AI Powered**

Save Copy Link Report

User can save a particular news event

The News Detail page for AAPL shows historical trend analysis. It includes a sidebar with navigation links: News Detail, Impact Analysis, and Generate AI Report. The main area shows historical trend analysis for the last 30 days:

- Avg 1-Day: -1.0%
- Avg 7-Day: -2.0%
- Avg 30-Day: -3.0%

Below this is an "Expected Price Trajectory" chart showing a downward trend from D1 to D30.

News Details page provides comprehensive impact analysis, summaries, historical trend analysis. It allows the user to share via copying the link or in the form of a report

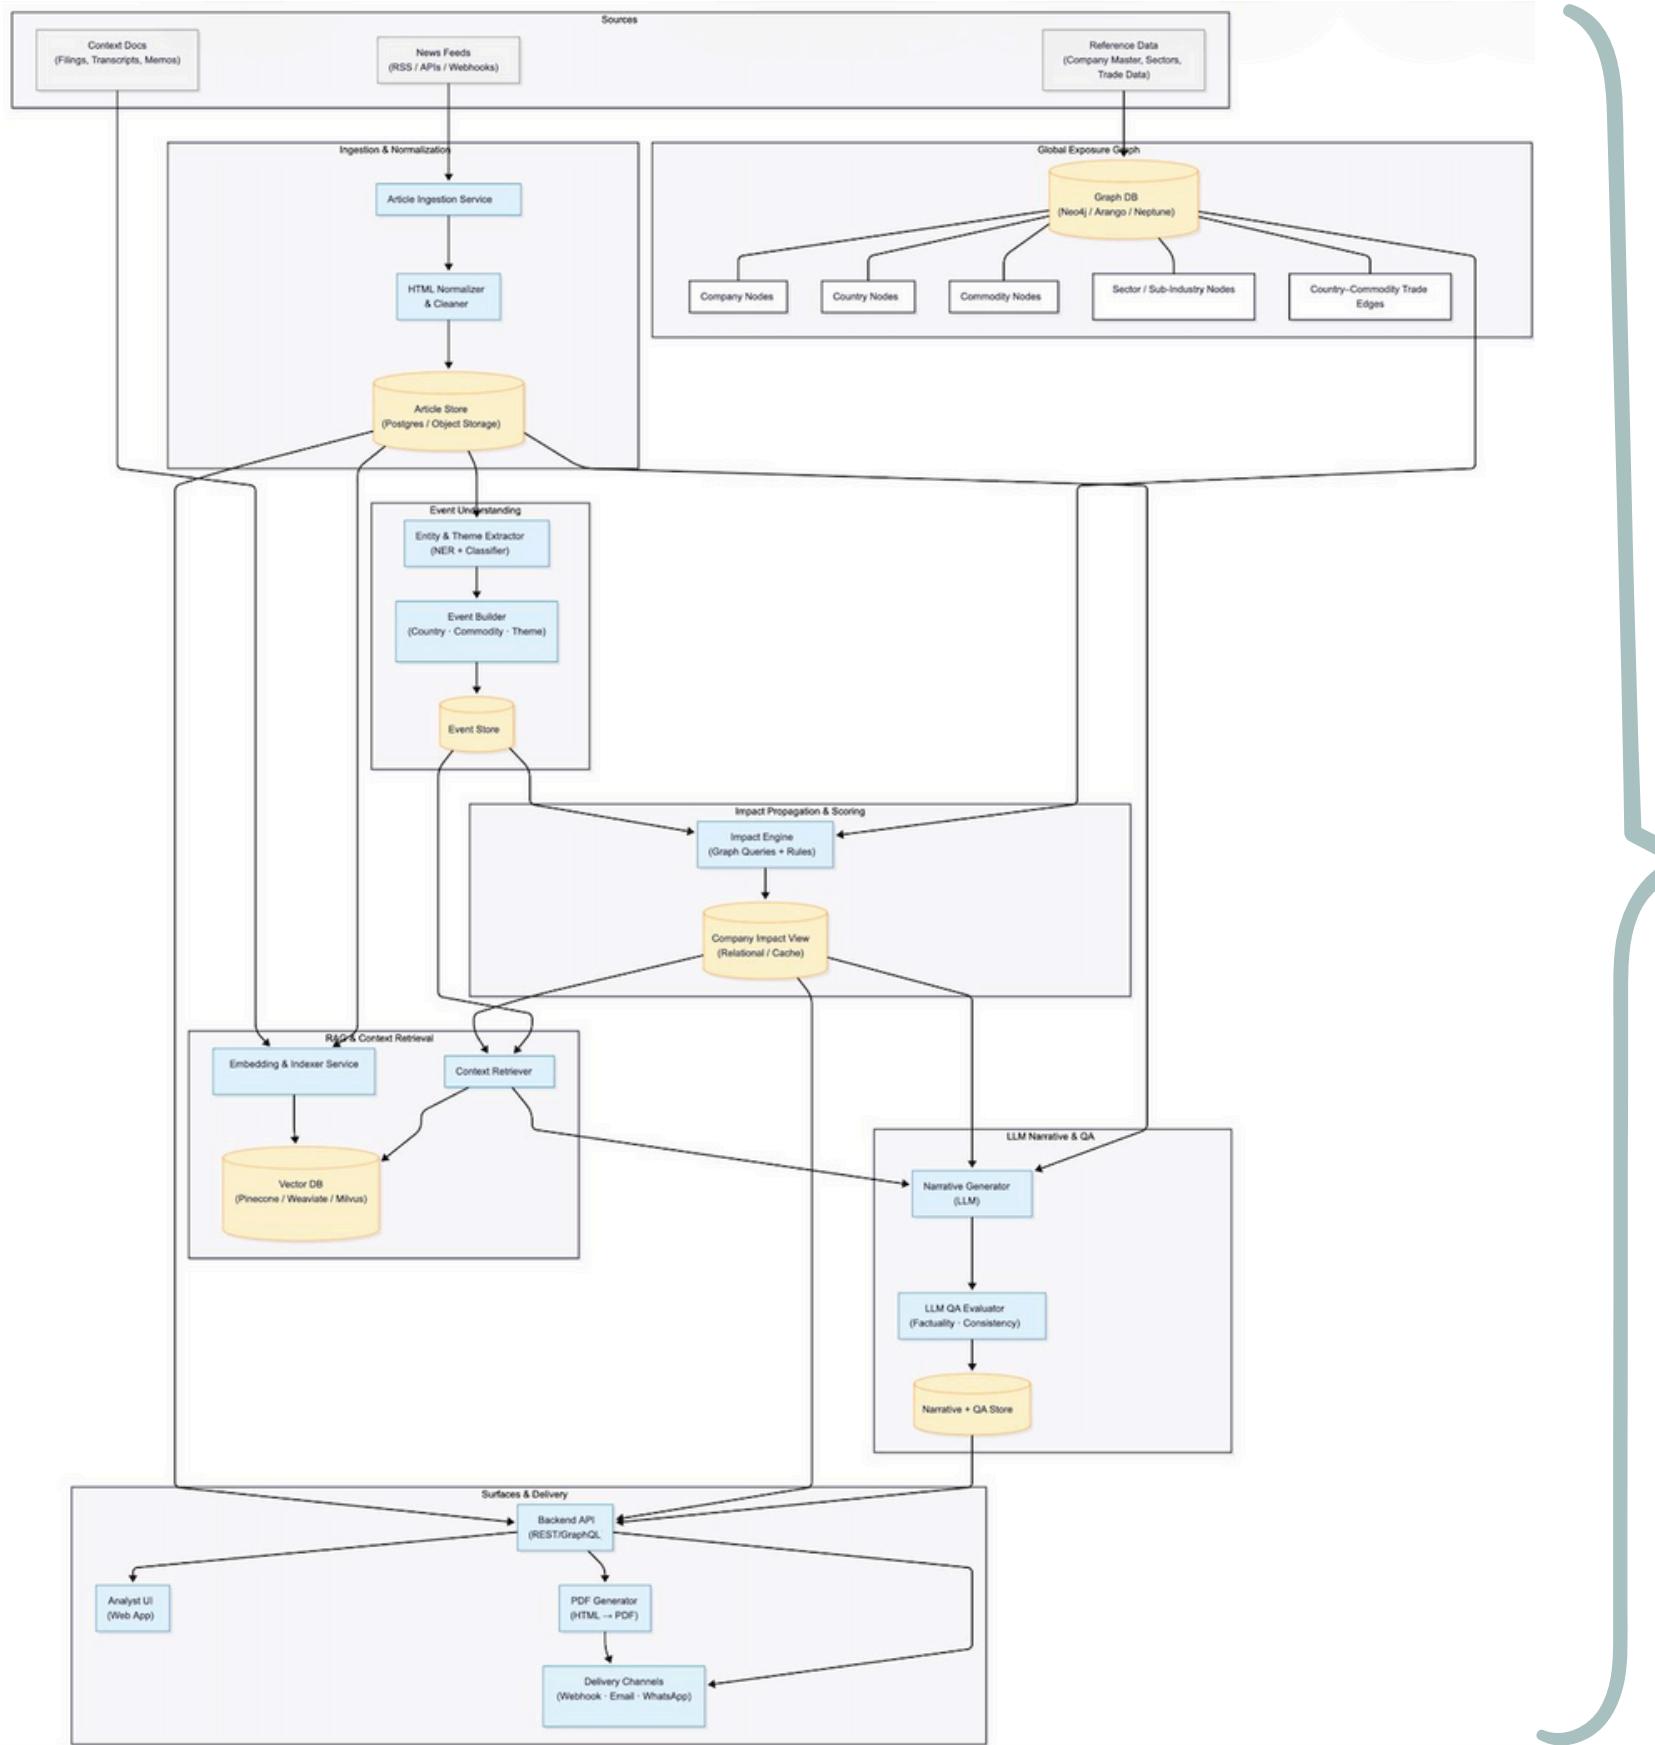

The News Detail page for AAPL shows AI analysis accuracy. It includes a sidebar with navigation links: News Detail, Impact Analysis, and Generate AI Report. The main area shows a feedback loop for AI analysis accuracy:

- Was this AI analysis accurate? (Accurate or Inaccurate)
- Historical Trend Analysis **AI Powered**
- Save Copy Link Report

Feedback loop arrows point from the "Was this AI analysis accurate?" section back to the "Historical Trend Analysis" and "Report" buttons.

The Generate AI Report page allows users to create professional research reports. It includes fields for Report Title (Q4 News Digest - Apple Inc.), Report Type (News Digest, Impact Analysis, Industry Overview, Custom Report), Company (All Companies), Date Range (27/11/2025 to 04/12/2025), and Include News Items (selected news items: Apple Reports Record Q4 Services Revenue, Beats... and NVIDIA Announces Next-Generation Blackwell Architecture...).

System Diagram

Functional Requirements

- Receive alerts for news events
- Filter news by impact, relevance, type, etc.
- Source citations navigating to the original article
- AI generated summaries and insights
- Historical trends for stock price and event correlation
- Save the insight
- Share functionality via copying the link, or report sharing
- Report Generation

Non-Functional Requirements

- API response time under 500ms
- Minimise latency from news ingestion to impact and insight generation
- Scalability to handle and process 1 million articles per day during high volatility
- The core ingestion, scoring, and API services must maintain a minimum uptime of 99%
- Client-specific data must be logically and physically separated from general training data and other client data.

Storage Component	Technology/Type	Primary Function
Article Store	Blob/Object Storage	Long-term storage of raw and normalized article text .
Global Exposure Graph	Graph DB	Stores complex entity relationships for impact modeling.
Event Store	NoSQL/Document DB	Stores structured event records (type, entities, time).
Company Impact View	Relational DB / Cache	Stores latest scores, alerts, and historical price data for fast API access.
Vector DB	Vector Database	Stores article embeddings for semantic search and RAG context retrieval.
Narrative + QA Store	Relational / Document DB	Stores final, validated LLM narratives and audit logs.

Detailed Feature Analysis : The North Star Metric for the proposed feature can be 'No. of accurate reports generated' from the feature

Pitfalls and Mitigation

Pitfall Category	Core Risk	Concise Mitigation Strategy	PRD Key Requirement
Model & Data Integrity	Inaccuracy & Hallucination	Source Transparency & XAI Confidence Scoring	Must link to original source and display an AI Confidence Score for every insight.
Model & Data Integrity	Algorithmic Bias	Domain-Specific Labelled Training	Must validate model fairness against market cap, sector, and geographic dimensions.
Model & Data Integrity	False Correlation (Historical)	Causality-Driven Feature Matching	Output must explicitly state the Statistical Significance and structural similarity of past events.
Compliance & Security	Data Leakage (Confidentiality)	Strict Multi-Tenancy Segregation	Portfolio data must never be used to train the general model. Enforce robust RBAC.
Compliance & Security	Regulatory Risk	Comprehensive Audit Logging	System must log all AI inputs, outputs, and the model version ID used for every single insight.

Metrics to measure success

No. of accurate reports generated (in the news feature of the app) can be chosen as a **North star metric**. This metric is measurable & actionable, and directly expresses the value that users derive from the solution (faster, accurate shareable impact analysis).

North Star Metric

No. of accurate reports generated (based on feedback in news feature of the app)

Reach

% of users that access News feature atleast once 1 month post launch
% of portfolio companies with at least one AI news insight generated in 2 days

Activation

% of users that perform at least one high-value action within 1 week of launch (share, copy link, report)
Session duration post opening historical trend analysis to know whether it's actually useful or not

Engagement

Average number of insights consumed per session
% of high-impact alerts not flagged inaccurate by users

Retention

DAU/MAU - stickiness in the feature
% of sessions where user navigates directly to news feature upon receiving alert

Future Roadmap

Progress Towards Alternate Data

- Success in news feature can be a big validation for progressing towards more **alternate data integration**
- Alt data like Transaction & Consumer Data, Geospatial & Sensor Data, Digital & Social Data can provide high predictive value for **forecasting based modelling**

Thematic Investment

- It's not uncommon to invest based on emerging themes & changing trends
- It's a very laborious but rewarding activity to know what are the **latest themes**, which companies are taking **action in those themes**, what are different players talking about
- Factual news events and **theme based insight generation** would be invaluable
